Engineering Secure AI Systems | Full Stack Developer & Pentester |  
Turning Vulnerabilities into Fortresses  
Albion, Queensland, Australia

## Summary

In a saturated digital landscape, security isn't an optional feature—it is the foundation.

I am not just a developer who writes code; I am a Cybersecurity Specialist engineering resilient architectures. My approach merges the agility of Full Stack development (Python/TypeScript) with the offensive/defensive mindset of a Pentester.

My Edge? I integrate Artificial Intelligence (LLMs & Prompt Engineering) to deliver software that is not only secure but intelligent and scalable.

Core Stack: # Security: Kali Linux, Pentesting, Social Engineering, Network Admin. Dev: Python, TypeScript, React, Next.js. AI: LLM Integration, Prompt Engineering, RAG Systems.

Currently building secure software solutions and consulting at <https://www.javiwarrior.com>.

If you are looking for clean, armored, and futuristic code, let's talk.
